

*“Installing systems that benefit the environment,  
cap inflation of electricity costs and  
provide a quarterly financial return”*

**Install NOW  
whilst  
Feed In Tariff  
is still  
available!**

*Installing a Solar System cuts electricity costs and gives a financial return.  
The Government Feed In Tariff currently stands at 21p per kilowatt hour.  
Costs for installing solar electricity can vary a lot.  
A typical example of a 4 kWp Solar PV System is shown in the example overleaf.*

- Premier Installers of Sanyo , Suntech and Samsung Panels
- Largest UK Installers of Micro-Inverters
- Live Demonstration Panels available to view
- High Quality Installations with recommendations from customers

**Windmill Hill, Ashill, Ilminster, Somerset, TA19 9LP**

*We initially carry out a free, no obligation survey during which we will outline what the process will be & answer any questions.*

*We can offer help & advice from design through to installation & maintenance.*

*A PV System is easy to install! Unless your home is a listed building, or in a conservation area, you do not need planning permission.*

*Generally, installation takes around 2/3 days and we work with our customers to ensure everything goes smoothly.*

*All our systems carry a minimum 5 year guarantee.*

### **Example:**

Cost of an average 3.92 kWp (Kilowatt Peak) PV Solar System (including Installation and VAT) **£10,495.00**

A 3.92 (kWp) PV Solar System will produce in the order of 3,900 kWh (Kilowatt hours) per annum

The FIT (feed in tariff) will pay you 21p per kilowatt hour  
3,900 x 21p **£819.00**

If you consume 70% of the energy you Produce, 70% of 3,900 = 2,730 kWh

The average cost of electricity is 14p per kWh.  
So per annum you save **£382.20**

Leaving 1.170 kWh to export back to the Grid at 3.10p per kWh **£36.27**

**Approx annual return £1,237.47**

*Tax free, index linked and guaranteed for 25 years.*
